

You can see the issues we found below in the Summary of each section and on individual Step pages.

APPLICATION OVERVIEW DOCUMENT

Ticketing and Booking

Congratulations on completing your application definition! This document presents a summary overview of your application as defined in the Pega platform. It encapsulates the key elements of your application's design, highlighting its core functionalities and overall structure.

Please note that this is a high-level view and does not include granular details like data models or sample data. It's an ideal resource for a quick reference, facilitating discussions among team members and stakeholders, and for guiding strategic decisions in your application development process.

Blueprint ID: BP-2405109

Application Context

Automate ticketing and booking processes for entertainment venues, including ticket sales, reservations, seating allocation, and payment processing, to streamline ticketing operations and improve customer experience.

Workflows (Case Types)

Movie Ticket Request

Allow customers to request movie ticket bookings, enable staff to manage show details and seating availability, capture customer confirmations before final booking, process booking requests, and notify customers upon booking confirmation.
